Professional Summary

Results-driven Software Engineering student with a strong foundation in full-stack development, AI applications, and algorithmic problem-solving. Hands-on experience architecting scalable web applications using ReactJS, NodeJS, and Python. Proven track record in open-source development, implementing CI/CD pipelines, REST APIs, and microservices architecture. Seeking to leverage software engineering expertise to contribute to high-impact projects.

Education

Graphic Era Hill University <i>Bachelor of Technology in Computer Science & Engineering</i>	Dehradun, Uttarakhand 2022 – 2026
Scholars Home <i>Senior Secondary (XII)</i>	Dehradun, Uttarakhand 2020 – 2021

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C, C++

Web & Frameworks: ReactJS, NodeJS, HTML5, CSS3, REST APIs, Microservices, Authentication

Databases & CS Fundamentals: SQL, Data Structures & Algorithms (DSA), OOPS, DBMS, OS, Computer Networks

Tools & Methodologies: Git, GitHub, VS Code, CI/CD, Agile, Debugging, Version Control, Fault Tolerance, Scalability

Academic Projects

Devsheel FA Web Platform | *Full-Stack Web Application* ReactJS, NodeJS, REST API, SQL

- Architected a centralized academic management platform utilizing ReactJS and NodeJS, improving course and assignment workflow efficiency by 30% for over 200 users.
- Implemented secure authentication protocols, RESTful APIs, and database integration to deliver a responsive, scalable user interface.
- Integrated JWT authentication with role-based access control (RBAC) and request-validation middleware to secure end-to-end user data.

AI Resume Analyzer | *Full-Stack AI Project* Python, ReactJS, NodeJS, NLP

- Developed a full-stack resume evaluation application that parses resumes against target job descriptions, scoring keyword density and skill alignment.
- Engineered text extraction algorithms and AI feedback pipelines to automate missing skill detection and optimize ATS parsing accuracy.
- Integrated full-stack API workflows to handle file uploads and return real-time analytical feedback, reducing user analysis wait time by 40%.

AI Ticket Assistant | *Full-Stack AI Project* ReactJS, NodeJS, REST APIs, Microservices

- Built a support ticket platform using AI to classify incoming issues, assign priority levels, and generate automated response drafts.
- Implemented complete CRUD functionality, REST APIs, and token-based authentication within a microservices-inspired workflow.
- Created an interactive frontend dashboard that streamlined issue tracking and reduced ticket processing time for administrators.

Lexical Analyzer | *Compiler Design Project* Lex, C, Data Structures

- Engineered a pattern-matching lexical analyzer using Lex to scan source code and extract tokens, including keywords, identifiers, and operators.
- Implemented error handling mechanisms to validate syntactical structures and generate clean token streams for downstream compiler processing.

Open Source Contribution

Zero-Key AI Job Scanner Node.js, CI/CD, Git

- Architected a zero-key AI job scanner in Node.js featuring a layered design and deterministic fallback mechanisms, passing 4,900+ CI/CD unit tests.
- Applied strict version control, code review standards, and automated CI/CD workflows to ensure high reliability and fault tolerance in production.
